Description of the Prior Art Energy is a commodity which is in limited supply. The generation of electricity is one of the most abundant sources of energy available. Many of the world's largest cities consume more electricity than all other cities combined. Most of the supply of electrical power in the world is hydroelectric power. The efficient conversion of the energy of falling water is one of the primary reasons for the existence of hydroelectric power, but unfortunately, this power is not always available. Hydroelectric power generation is, however, much more widely available than other forms of energy generation, and the potential for hydroelectric power generation is enormous. For example, the generating capacity of the Grand Coulee Dam, one of the world's largest dams, is far more than sufficient to meet the total electrical energy requirements of the United States. In fact, the Grand Coulee Dam was originally built to power
