Applications that have been created using AutoLISP or Visual LISP language are compatible with newer versions of AutoCAD Cracked Accounts, but cannot be transferred to earlier versions of AutoCAD Crack or to other AutoCAD products. This has greatly reduced the number of applications made using AutoLISP and Visual LISP. AutoCAD 2000 could be used as a macro language to create custom macros for other Autodesk products, using the AutoCAD macro language. To facilitate the creation of these macros, the AutoCAD macro language provides a GUI macro editor. AutoCAD 2002 introduced a visual programming language called Visual LISP. It was similar to the LISP programming language except that it could also be used with all previous versions of AutoCAD (1999 to 2002). AutoCAD Visual LISP was subsequently replaced by the Web Macros language. AutoCAD 2003 introduced Visual BASIC (VB) and Scripting Language for AutoCAD (SLA) as programming languages for AutoCAD. SLA can only be used to write drawing applications for AutoCAD 2003. AutoCAD 2003 introduced the Model Architect tool, which was mainly intended to create high-end user interfaces. It uses a Model Navigator with a Tree-based user interface as well as the existing mouse and keyboard controls, although it provides modeling tools which are similar to the ones in AutoCAD LT. The Model Architect uses a command-based user interface in addition to the model navigation and keyboard controls. AutoCAD 2009 introduced the following programming languages: Visual LISP, Visual BASIC for AutoCAD (VB), Scripting Language for AutoCAD (SLA), ObjectARX, and.NET. AutoCAD 2009 introduced the following command line editor tools: ClearLine, ClearMarkers, ClearShapes, ClearDirectives, ClearSelection, ClearGraphs, ClearSplines, ClearMarkers or Sorts, ClearEntity, ClearFilters, and ClearTables. AutoCAD 2009 introduced the following macro editors: Macro Editor, Macro Studio, and Web Macros. AutoCAD 2009 introduced the "Power of the Web" in AutoCAD online, which allows online users to download and install AutoCAD plugins. ## What's New In AutoCAD?

A new import feature in the tool palette, called Markup Import, lets you quickly import data from paper-based or electronic information sources such as PDFs and spreadsheets. Previously, you would either import data into your drawing and then add changes, or you would add the data to your drawing directly. Both require additional work. With the new Markup Import, you can import new data into your drawing as you work, and immediately incorporate the changes you've made in your drawing into the new data without adding additional drawing steps. To quickly import data from paper-based information sources, you can use PDF attachments in your email. Attach a PDF file to an email, and the attached data will appear in your drawing immediately as you work. To quickly import data from electronic information sources, you can use Autodesk® Crowd Analyzer to upload data to your design software. When importing data into your drawing, you can choose from a set of predefined templates that describe how the imported data will be displayed. You can choose from three template types: list, grid, and legend. Templates let you import data quickly without having to adjust a template to your design. The new Markup Assist feature in the tool palette lets you easily create annotations. Annotations give you the ability to easily mark locations, show dimensions, and create labels for information on-screen or in your drawing. You can use Markup Assist to annotate the screen for your project or annotate your drawing for clients. To turn annotations on and off, you can choose from three levels of detail when you turn on annotations. Design Responses for Design Changes: Quickly review design changes to your drawings. Design Responses offers real-time feedback for changes to drawings as you make them. Design Responses lets you accept or decline changes, and lets you add comments to a changed drawing. You can turn Design Responses on or off at any time. With Design Responses, you can accept or decline design changes from users with Autodesk 360, and comment on specific changes from users with Autodesk 360. You can comment on a change with a positive or negative response. You can respond quickly to changes by adding a positive or negative comment, and you can also add comments to comments. In Design Responses, you can accept or decline changes by reviewing them in a pop-up box in your drawing, and
