Very bright effects. Wasn't perfect though. But from what I have looked up i was at 184km/h +235km/h in 3rd gear well i did rip it off. Then did it again for a few more laps in 4th at about 170km/h but the ses looked way more exciting. Also the effect wasn't clean like on the manual vehicle. Sounded like a punch in the middle of my chest. Sounded great while doing to music. Really good on some of the normal roads, plus, the game has Team-Kia anthems like Motive, and Wild Green Yonder that you can use when behind the wheel of Kia. A long straight of insane speed followed by a swerve to the right I may have tapped the brakes, or been off the road as my right foot after that small impact wound up stuck in it's grasp. I let go of the brake. Too late. I hit something - way too hard for it to be anything else. Wood, glass, brick, or metal - no way of knowing. The car sped off and so did I. I have a fractured nose. On my way to the hospital. Surgeons say 6-8 weeks in recovery. Instead of the immediate recovery 9-12 weeks claim. \*

With 40 million cacti and over 50% of species endangered as a result of invasive cacti (aka fan cactus, invasive prickly pear and Death Carpet), we begin our ‘Edible Cacti’ series with Gyalorus olivaceus. From Amazon comes the news that the popular celebrity chef Jamie Oliver is preparing to take the green shoots of gyromitra esculenta (known as Flying Dutchmen) on his next course for his British fans. “It’s famous, exotic, cool, people are fascinated by growing these plants ... I’m very much a fan,” he told The Telegraph. The website also named the plants “one of the world’s most aggressive and bitter plants” that could present a health risk to people with high levels of sugar in their system. As for the writer, The Literary Studies Guide states: “Vegetable-eating appears to have first occurred in Britain during the Bronze Age, but there is evidence of direct and indirect consumption of the leaves in Europe for at least 1,000 years prior to that.” A little information about the health benefits is widely available in the media. The fact that consuming cacti is an effective health solution for diabetes and weight loss, but both topics are outside the scope of this guide. As for Gyalorus olivaceus’ cultivation, Asa Gray described the low-growing clump-forming cactus as “exceedingly common in the western plains of the United States [and] also widely distributed in Mexico and in southern Texas and California, but it is very sparsely known in Europe.” An informative video on the history and habits of Gyalorus olivaceus can be viewed here: CommentsSecret Service focuses on Ivanka’s Inauguration security For the White House
